

Case Study:

Ring Container Technologies

Company Profile

- Multinational corporation with 22 locations in the United States, Canada and Europe
- Headquartered in Oakland, Tennessee
- Focused on customer packaging industry
- Customers include Cargill, Del Monte, Riley Foods Company, Unilever and Ventura Foods, LLC
- Member of the Sustainable Packaging Coalition
- One of the largest plastic container manufacturers in North America

Use Case

- Numerous manufacturing plant locations in the U.S., Canada and abroad.
- Remote locations and varying network connections created a challenge in finding a solution that would function across the board.
- Before coming to EVS, Ring Container Technologies was using a different cloud backup solution which was very basic and manually-intensive.

Results:

Consistent Nightly Backups at All Locations

- EVS was able to install the EVS Intelligent Backup, powered by Asigra, at more than 24 plant locations in the U.S., Canada and the UK, as well as desktops and laptops.
- Provided Ring Container Technologies with a competitively-priced solution that would provide consistent nightly backups at all sites, even those with slower network connections.
- Data transfer is done completely over the network, managing sites in Canada and the UK presented no extra challenge.

Eliminated Manual Intervention

- De-duplication reduced the amount of data transmitted over some location's slower network connections.
- Ring Container saw an immediate reduction in direct labor inputs.
- Because the Intelligent Backup solution was fully automated and managed, Ring Container Technologies employees didn't have the hassle of managing a backup solution on their individual systems.
- The enhanced efficiency didn't come at the expense of additional manpower, which allowed IT resources to be focused on other tasks.

Testimonial

“EVS was able to offer us a high quality, cost-effective and highly customized solution for our manufacturing plants across the United States. We also value the personalized service and the certified technical team working every day to assure that our backups are successful”

- Brian Didlake, IT Operations Manager, Ring Container Technologies
